## LINE PRINTER CONTROLLER for use with PDP\* -8 Computers

### MDB Line Printer Controller for DEC PDP\* -8 Computers

- Low-cost line printer controller
- Completely software compatible
- Transparent to host computer
- Extra operating features

The MDB Line Printer Controller for DEC PDP-8 computers gives total line printer capability with no change in system software. Just plug-in the MDB module and connect your line printer through the cable furnished.

Transparent to the host computer, the controller is completely compatible with host computer diagnostics, drivers, and operating systems.

Popular line printers that operate with the MDB

controller include all models of the following:

Centronics*	Data 100
DEC LA180	GE TerminiNet**
Data Products*	Houston Instruments

\*Includes Printronix, Tally, Diablo 2300, CDC and other printers emulating these interfaces.

Operation and programming considerations are exactly as described by DEC for either the LP-8 or LS-8 line printer controller.

The controller is a single printed circuit board that fits into one quad slot in the PDP-8 chassis. The board comes with a 15 foot ribbon cable, with mating connectors furnished for connection to the line printer.
